From Flash to HTML5 available without Poki games

Since people have always enjoyed unwinding and having fun, they

have created numerous devices or simply exploited resources that were available to them. That is how things familiar to us were created: balls, s

kittles before that they were just stones and sticks. But now we have all these technology and devices, thanks to which the gaming component of every

day life has increased many times.

Since modern browsers have stopped supporting Flash technology since 2024, games based on this system are gradually leaving web pages. However,

there are still some of the most popular toys that work in browsers

using special emulators. HTML5 technology significantly expands the possibilities

for players. Created using modern developments, HTML5 games can be launched both on desktops and on many other devices of various

modifications.
