Decreased sunlight can cause drops in your body's

production of serotonin, a brain chemical that helps to determine mood.

Lack of light can also alter the brain's balance of melatonin, a chemical

produced during the hours of darkness that helps to govern sleep patterns and

mood

We are affected a great deal by being

more tired

. And it's very much due to our physiological processes in the body.

The sleep hormone we have called melatonin is secreted in the body when it's

dark
