

# O O bet365

Sequels are as much a part of horror as any other genre, so when Jim Vejvoda of IGN sat down with Jennifer Kent, the question of a 'Babadook' sequel inevitably came up. Specifically, Vejvoda asked Kent if she was afraid that the stand-alone gem would become diminished by a 'sequel factor,' and if she'd have control over an outside source making another movie. Fortunately, Kent confirmed that she and the producers own the rights to any sequels, so they'd have the ultimate say. On that note, she took the opportunity to shut down any speculation we shouldn't expect 'The Babadook 2.' As she explained, 'The reason for that is I will never allow any sequel to be made because it's not that kind of film.'

It seems like Kent always knew 'The Babadook' wouldn't have a sequel, and for good reason. She went on to say, 'It's just not what the film's about. It would destroy the integrity of everything we worked so hard to protect.' That makes sense, as the film's focus is specifically on the trauma of Emilia and Samuel, a story that's now been told. A sequel would dull the underlining meaning of the movie.

Sometimes, a movie with a purpose like 'The Babadook' is fine standing on its own.

## As Duas Últimas Rhinos Brancas do Norte: Uma História de Extinção e Esperança

Existem apenas duas rinocerontes brancas do norte restantes no mundo: Najin, uma fêmea, nascida em 1989, e Fatu. Infelizmente, o pai delas, Suni, faleceu em 2014, e Curra, a mãe de Najin, morreu em 2024, deixando atrás apenas as duas fêmeas.

Curra foi submetida a uma necropsia, revelando um feto macho de 70 dias no útero. Ela estava grávida no momento da morte, o que é um interesse adicional para a preservação da espécie.

A extinção é o resultado da caça ilegal para obter chifres de rinoceronte, com alta demanda no mercado asiático por suposta capacidade de cura em medicina tradicional. Além disso, a perda de habitat natural, devido ao crescimento da população humana e atividades agrícolas, também contribuiu para a extinção.
